

AMENDMENTS TO THE SPECIFICATION

Please replace Paragraph [0041] with the following paragraph rewritten in amendment format:

[0041] In the first backup cleaning bath 602 and the second backup cleaning bath 603, a hydrocarbon-based cleaning liquid is stored which is composed of a normal paraffin, such as normal nonane or normal decane, as a primary component and a surfactant as an additive. The surfactant described above is, for example, a fatty acid alkanol amide, or a fatty acid N-alkyl alkylene diamine, and the additive described above is added at a content of, for example, 5 wt% or less. In this embodiment, as the additives, a fatty acid alkanol amide represented by the formula shown below,

$\text{R}^1\text{CON}(\text{R}^2\text{OH})_2 \cdot \text{NH}(\text{R}^2\text{OH})_2$ (in which R^1 and R^2 are alkyl groups), and a fatty acid N-alkyl alkylene diamine represented by the formula shown below,

$\text{R}^3\text{NH} \cdot \text{R}^4\text{H}_2 \cdot 2 \text{R}^5\text{COOH}$ (in which R^3 and R^5 are alkyl groups, and R^4 is an alkylene group) are added at a content of 5 wt% or less, respectively.
